# SUSTAINABLE DEVELOPMENT GOALS

## Resolution

The **Institute for Excellence in SDG`s** dependent on **CIFAL ARGENTINA**, a Public Private Partnership between **UNITAR (UN)** and **Luciérnaga Foundation**, CERTIFIES that the Program called “**VOLUNTARY MARKET FOR INFINITE FOREST CARBON**”, created by the company FICO S / A, complies with the requirements to enter the PROCEDURE OF ACCREDITATION OF THE PROTOCOLS OF AGENDA 2030, seal of quality issued by this Institute.

The ACCREDITATION process is based on specific protocols that analyze the objectives, procedures, research and development of technologies that compromise concrete, empirical and monitoring contributions to reach the UN AGENDA 2030 Goals.

Under these premises, FICO S / A, undertakes to deploy strategies for the research, development and application of high impact technologies in the areas of action for climate, ecosystem preservation; and thus covering a wide range of Sustainable Development Goals (SDG / UN), such as SDGs 13 - 15 - 3 - 17, directly and by impact on the rest of the SDG`s.

This QUALIFICATION is based on the following premises:

### [From the Infinite Forest Carbon \(IFC\) methodology](#)

The certification of **Infinite Forest Carbon (IFC)** is considered a fundamental initiative for the development and expansion of corporate humanitarian actions for environmental preservation; as well as the practice of a social economy with low carbon emissions.

It is an innovative program for the voluntary forest carbon market, with emphasis on the private sector. The supreme objective is the complete maintenance of the Biodiversity of the native primary forest that contributes in a real and direct way to the carbonization of the planet, besides motivating and encouraging a new economic and business activity that brings benefits to humanity and biodiversity. IFC complies with the global call for action against non-deforestation and degradation of the forest environment.

With the introduction of the **Infinite Forest Carbon (IFC) methodology** as a corporate option, financial compensation is promoted. Therefore, the Infinite Forest Carbon (IFC) methodology represents a very clear solution, in addition to motivating and encouraging a new commercial option in the corporate forestry activity, which presents an innovative payment mechanism for ecosystem services and is a self-technology remuneration for the environmental service provided to all humanity.

*Under the analysis of the program called “VOLUNTARY MARKET FOR INFINITE FOREST CARBON”, it is RESOLVED that it QUALIFIES in the fulfillment of the Sustainable Development Goals of the UN AGENDA 2030.*
